

# Fedora Tips Coin Roadmap

*Do you accept **Tips**?*

## Synopsis

Fedora Tips is a swift, highly secure transactional coin typically used in online tipping and small value transactions. The Fedora Tips Roadmap has been developed to address the short and longer term needs of the Fedora network and the Tips Coin community. Since mid-2017, a renewed Tips community has coalesced around the Fedora project. The goal is to refresh and redevelop both the underlying technology and the use cases that enable the wider adoption of **Tips for fast, secure and low cost transactions.**

The Roadmap spans a twelve month period commencing March 2018, and has been divided into four stages to address the fundamental needs of the Fedora Tips Coin. Each stage will address one of the key Fedora project goals:

## Roadmap Detail

The next twelve months will see many long awaited changes in the Fedora Tips Coin infrastructure. The development work has been structured around a hierarchy of needs, these strategic needs that have informed the Roadmap goals:

***Foundation - Establish a tech baseline to enable future development***

***Enhancement - Deploy value add Tips features and use cases***

***Engagement - Bring the new Fedora platform to the wider tipping community***

***Uplift - Take the refreshed Fedora community and infrastructure to the next level***

Each stage will build on the achievements of the previous, and feature releases based on the essential use cases we have developed for the Roadmap.

The Fedora project team has been working for the last six months on technology upgrades and strategic planning. The first release is complete and includes:

- A highly upgraded and secure desktop wallet
- The Fedora roadmap
- A renewed and growing Fedora community across multiple channels

# Foundation - March 2018

*Safe, Swift and **Secure***

## Foundation Stage

The purpose of the **Foundation Stage** is to:

- Re-establish the baseline Fedora Tips Coin technology
- Enable future development of advanced Tips features
- Grow the Fedora Tips community

There are two releases planned during Foundation

**Release 1 - Trilby, March 18th 2018**

**Release 2 - Stetson, May 2018**

### Release 1 - Trilby

Trilby went live on March 18, in parallel with this Roadmap. The core features of Trilby were developed over the previous six months. These features address the demands of a contemporary cryptocurrency: **safe and swift transactions coupled with a secure store of user value**. With this in mind, the Trilby features include:

- Fully upgraded Windows wallet
- Redeveloped wallet database
- Latest security modules
- Paper wallet generator
- Outreach to new exchanges
- Refreshed community social channels
- Mining guide on the [Fedora wiki](#)

The Fedora wallets have undergone a major upgrade, with the project team conducting extensive development work. Every library and module has been fully updated to the latest versions, the database has been completely rebuilt and security updates have received a special focus. Our rigorous testing cycle has addressed security and usability, and we are confident that the Fedora wallets now offer unparalleled robustness. The wallet can be [downloaded here](#), the complete source is available on our [github repo](#). Please download the code and study it for yourself, we'd love you to fork and contribute!

We have produced a [getting started guide](#) to assist users who are new to Fedora or who wish to upgrade from an earlier wallet version. Due to the legacy database design a resync will be required, however our next major wallet release will address this via bootstrap and auto-update functionality.

# Foundation - March 2018

*Safe, Swift and **Secure***

## Release 1 - Trilby (cont)

In addition to the technical work completed to date, we have re-established a set of active social channels that are online and ready for your involvement - please bookmark and share:

## Release 2 - Stetson

Planning of the second Foundation release **Stetson** is at an advanced stage, however the Fedora project welcomes and needs the input of the wider Tips community to play a part in the ongoing release management process. The planned release of Stetson is May 2018, with the initial target feature set to include:

- Fully upgrade Linux wallet
- Fully updated Mac Wallet
- Enhanced wallet functionality (all platforms)
- Mobile wallet design prototype
- Designs and use cases for Tips bots
- New exchange listings (focussed on decentralized exchanges)

This will complete the Foundation stage of the Fedora relaunch. Right now we are canvassing Tips community sentiment on how to shape the future of this coin - community is the rationale and bedrock of the Fedora Tips project! Please get involved and lend your support.

# Enhancement - June 2018

## Value Added *Tips*

The **Enhancement Stage** is where we start deploying some of the next generation Fedora functionality to take Tips to the next stage of its' evolution:

- Final stage desktop wallet including auto-update and bootstrapping
- Standard in-wallet mining to democratize the mining process
- Redeveloped Tips bots for major social channels
- Tips faucets (as part of a wider API development program)
- Mobile wallet release!

The Enhancement stage is currently slated for two releases:

**Release 3 - Boater, June 2018**

**Release 4 - Panama, August 2018**

### Release 3 - Boater

The Boater release will be the **next major evolution of the Fedora desktop wallet**, building on the fundamentals that we established with the refreshed wallet infrastructure during the Foundation stage. We intend to complete the core roadmap functionality across all wallets (Windows, Linux & Mac), which will include some exciting features not readily available on the average crypto wallet.

Features in the design for the Boater release incorporate:

- Major functionality upgrade across all desktop wallets
- Streamlined user experience via Auto-updating - no more messing around with data files and config settings
- Bootstrapping to make blockchain downloading transparent
- Customizable social feeds within the wallet
- Enhanced Paper wallet generators - print your own Tips cards, flyers and posters!

### Release 4 - Panama

Things start to get very exciting once we reach Panama (release 4). This is where the state of the art **Fedora mobile wallet** will be released, as well as a range of services based on a layer of Tips API's. We have made an architectural decision to incorporate Tips bots, faucets and related services within our comprehensive API design, and build these within the context of a wider goals for Fedora web services. Panama release will feature:

- Full function Android Tips wallet
- Full function iOS Tips wallet
- Tips bots across key social channels
- Tips faucets delivering real value to support the end user community

# Engagement - Sept 2018

## Growing the *Tips Community*

The foundational work during the early roadmap will underpin the **Engagement Stage**. We recognise that Fedora Tips coin is built on a strong community, however community outreach can only be successful when the fundamentals are all in place. With robust wallets across multiple platforms and a proven solution architecture, Engagement is when we extend our reach to the broader tipping community - both online and face to face. Key features include:

- Updated mobile wallet supporting face to face tipping
- Improved network architecture
- Increased transaction speeds
- Additional Tips bots across social networks
- Enhanced block explorer

The Engagement release schedule includes two major releases:

**Release 5 - Derby, October 2018**

**Release 6 - Porkpie, November 2018**

### Release 5 - Derby

Tipping happens everywhere, everyday. Our vision for Fedora Tips is not just online tipping but also face to face tipping, whether it be in bars, restaurants, markets, exchanges or even just giving gifts!

The Derby release will feature an **enhanced and upgraded mobile wallet** that enables **face to face tipping** in all situations!

To achieve our vision of the preeminent tipping mechanism, our mobile wallet upgrade will:

- Support face to face and near field tipping
- An enhanced network architecture
- Significantly improved network speeds

You don't have time to wait when you're tipping!

### Release 6 - Porkpie

The Porkpie release will be focussed on marketing and development, especially to vendors and organisations that currently rely on legacy tipping with fiat currencies. Our applications will include vendor focussed functionality, and also further integrations in the online tipping space.

- Vendor versions of Fedora wallets
- More Tips bots across the social networks critical to our users
- Upgraded and refreshed block explorer with enhanced analytics

# Uplift - Dec 2018

**Take *Tipping* to the next level**

## ***Uplift - Take the refreshed Fedora community and infrastructure to the next level***

The Uplift stage will continue our push to take Fedora Tips further into the mainstream of tipping and small value transaction commerce. We have developed a number of specific, key goals and features as part of Uplift, however at this time we are keeping these under the radar. Suffice to say that the Fedora network is being re-architected to more deeply embed Tips into everyday, real world transaction settings

The Uplift release schedule is yet to be finalised, but will commence in December 2018. We expect to consult with the Fedora community regarding the release scope and management of the delivery schedule. In addition, we are working on several innovative features that are not currently available in the crypto space. We need to preserve a little mystery!

***Note: the release scope and schedule will be shared during the Engagement stage!***

## **Wrap Up**

Thank you for taking the time to study the Fedora Tips Coin Roadmap. This has been, and will continue to be, a product of the collective Fedora Community. We value the input of everyone, and if this Roadmap has piqued your interest why not get involved? You don't need to be a guru hacker - there are many, many activities involved in the redevelopment of a legacy crypto!

Please engage in our various channels and forums, and follow us on our journey!
